Mini-Project 1 Update

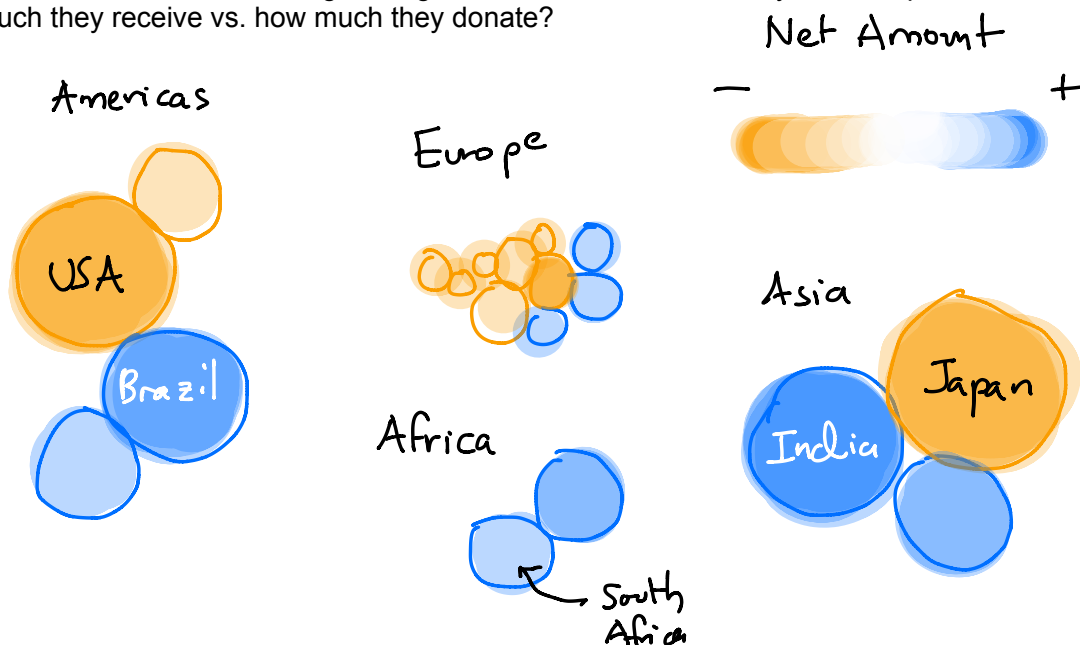

I've finished designing and sketching my solutions (below) and am currently reviewing the d3 lectures to reacquaint myself with the library before building the visualizations.

Sketches

Visualization 1: How do the countries compare in terms of how much they receive and donate from other countries? Are there countries that donate much more than they receive or receive much more than they donate?

Visualization 2: Do the countries that receive the most tend to cluster around specific geographical areas of the world? Are there neighboring countries that have radically different patterns in terms of how much they receive vs. how much they donate?

Visualization 3: Are there any major differences in how the top 5 most frequent purposes of disbursements distribute geographically in terms of countries that receive donations? Are there countries that tend to receive more of certain type of donations than others?
